***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 7-17 drawn to a liquid crystal display (LCD) device, classified in class 349, subclass 141.
- II. Claims 18-21 drawn to a method of fabricating a LCD device, classified in class 349, subclass 187.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the claimed product can be made by methods wherein the domains are formed by a rubbing process (instead of using polarized ultraviolet (UV) radiation) or wherein a liquid crystal layer having an initial low resistivity is used (instead of introducing an impurity into the LC layer).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and vice versa and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Further, Group I and Group II each contains claims directed to the following patentably distinct species of the claimed invention:

Group I

A(I): claims 7-10 drawn to a LCD device of Third Embodiment (Fig. 5).

B(I): claims 11-17 drawn to a LCD device of Fourth Embodiment (Fig. 11).

Group II

C(II): claims 18-20 drawn to a method of fabrication of a LCD using polarized UV radiation.

D(II): claim 21 drawn to a method of fabrication of a LCD comprising the step of introducing an impurity into the LC layer.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of the elected Group for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
